

Leading Lighting Solutions

Anolis Inspiration

Anolis is a leading LED lighting brand specified by architects and lighting, visual and interior designers worldwide.

Anolis – Latin for ‘chameleon’ – offers a dynamic, fine quality product range that opens a myriad of imaginative horizons. It provides creative and environmentally sustainable solutions for all types of indoor and outdoor spaces, places, objects, structures and built environments.

New perceptions and greater understanding of how mood and colour-changing lighting can influence an environment – from work, private or public spaces, boardrooms to living rooms, clubs, bars and restaurants to the exteriors of impressive buildings or in contributing to contemporary art works - has stimulated massive interest in LED lighting.

Anolis is at the forefront of developing exciting new technologies to meet these demands and challenges.

Simultaneous concerns for providing low-energy answers to an increasingly “green” conscious world are at the top of the Anolis agenda.

Anolis is designed and manufactured in Europe to the highest specifications using the best available and most up-to-date components, providing quality-engineered, precision manufactured cutting-edge LED lighting products.

> Brisbane Bridge

The Gateway Upgrade Project is one of the largest bridge and road projects undertaken in Queensland's history. A State Government initiative, the project is being delivered by Queensland Motorways with design and construction by the Leighton Abigroup Joint Venture (LAJV). When completed in mid 2010, the new Gateway Bridge will join its twin as one of the top 10 longest cantilever box girder bridges in the world. The lighting system is made up of 2500 customised LED strips comprising some 100,000 individual LEDs and over 45,000 metres of cable.

> The Khan Shatyr Entertainment Center

The Highest peak on the skyline of Astana, is a civic focal point for the capital of Kazakhstan and it is a delighting and attractive space with its entertainment areas. The lighting concept is based on differentiating spaces from each other and defining zones. Each zone concerning games and attractions with various themes were focused individually. Contrasts in brightness and color changing lighting effects accentuate eye-catching features of the architecture.

> Zorlu Center

Is located in the Levent / Zincirlikuyu district on Buyukdere Avenue in the heart of business district of Istanbul adjacent to the main luxury residential and commercial neighborhood. It serves as a bridge between the Asian and the European continents. The concept for the lighting design project is derived from the seasonal and daily weather conditions in the location, the transition from the winter season to the summer season, like shifting between warm and cool. This idea is reflected in the project by the use of dynamic white light in both indoor and outdoor spaces.

> Bolte Bridge

The Bolte Bridge – one of the largest balanced cantilever bridges in Australia – forms part of the CityLink system of toll roads and spans Melbourne's Yarra River. The new Anolis LED lighting system was installed to illuminate both sides of the bridge, allowing to create endless colour schemes for special cultural and sporting events happening in the city. The environmental benefits and cost savings achieved in this projects, stand as a great example of how to replace 'out of date' lighting installations with new economic and sustainable solutions.
